

ZINC PROTECT

VITAL MINERAL FOR OPTIMAL HEALTH

Item #SY1601
120 tablets

From Antimony to Zinc, your body needs minerals to function properly. Zinc is key to hundreds of important functions, including sugar and protein metabolism, DNA synthesis and cognitive function. Additionally, it supports proper growth and development, while helping strengthen your immune system.

- Supports immune function.
- 15 mg Zinc per tablet

The Story behind Zinc

It wasn't until 1961 that researchers discovered the importance of zinc to the diet. Zinc deficiency can affect several systems, including the nervous, skeletal, immune, and reproductive systems. It can also affect the function of the GI tract and the skin.

Why Synergy Zinc Protect?

Purity. Our zinc raw material is free from phthalates, allergens, animal derivatives, carcinogens and toxins. It's certified Kosher and Halal. We are partnered with a mineral supplier that shares our commitment to excellence, safety and purity. Their pure ingredients are manufactured in cGMP-certified facilities in US.

KEY INGREDIENTS

- Zinc gluconate
- Kelp leaves and stem
- Thyme leaves

ABOUT ZINC

Zinc is a trace mineral with many functions and benefits. It supports the immune system, plays a role in metabolism, and contributes to normal cognitive function. Zinc also assists with taste and smell.

Research shows that zinc can support multiple parts of the immune system. Zinc is vital for the development and function of cells that support innate immunity. Zinc deficiency is associated with impaired function of these cells.

Zinc may also be linked to skin health. Zinc contributes to the maintenance of normal vision as it is crucial for the normal vitamin A metabolism in the retina of the eye. It also supports healthy bones, macronutrient metabolism and metabolism of fatty acids.

KELP LEAVES AND STEM

Seaweed has long been known to contain beneficial trace minerals, including iodine.

THYME LEAVES

It may be called *Thymus vulgaris*, but there's nothing offensive about this botanical. A member of the mint family and a cousin of oregano, thyme's many constituents offer health benefits to the immune and digestive systems. It also has been used traditionally for respiratory tract support, including cough expectoration.

Thyme's active constituents include monoterpenes such as thymol, limonene, carvacol, gamma terpinene, plus tannins, flavonoids, and triterpenes.

Thyme is native to the Mediterranean region, and Romans were known to eat it to ward off food poisoning. Before the onset of refrigeration, people regularly cooked with thyme to help protect against spoilage. According to research, the active constituent thymol provides immune-modulatory benefits.

RECOMMENDED USE

Take 1 tablet daily with a meal.

Ingredients: Dicalcium phosphate, zinc gluconate, cellulose, Kelp thallus powder (*Ascophyllum nodosum*, *Laminaria digitata*), Lucerne aerial parts powder (*Medicago sativa*), Thyme leaf powder (*Thymus vulgaris*), magnesium stearate, carnauba wax.
